SUMMARY

Software Engineer with 3+ years of experience building scalable full-stack systems, performance-critical workflows, and developer-focused platforms. Proven track record of optimizing large-scale document generation systems, improving application performance by up to 86%, and delivering impactful user-facing solutions across enterprise products. Experienced in ReactJS, Python, System Design, and Workflow automation, with a strong focus on scalability, reliability, and clean engineering practices.

EXPERIENCE

Tekion

Software Engineer

April 2025 – Present

Bengaluru, Karnataka

- Implemented a high-performance PDF generation system using the open-source Typst framework, reducing generation time by 86% while improving document reliability and scalability
- Built an AI-powered video content generation pipeline using Veo 3 integrated with dealership opcodes, improving technician onboarding and increasing recommendation conversion by 20%

Tekion

Associate Software Engineer

July 2023 – March 2025

Bengaluru, Karnataka

- Developed a Page Break Algorithm to simulate real-world printing behavior, ensuring precise alignment of PDF content across multiple sheet sizes
- Implemented a consent management system for dealership customers, ensuring compliance with US and UK data privacy regulations for sending promotional offers, reducing legal risk and enhancing customer trust
- Engineered and optimized a technician wage calculation algorithm, enhancing billable hour tracking and performance data analysis, reducing payroll processing time by 20% and increasing client profit margins by 15%
- Integrated a scalable E-Signature Platform into the PDF generation pipeline, enabling users to create personalized disclosures and seamlessly sign documents via web customer portals

Tekion

Associate Software Engineer Intern

Jan 2023 – June 2023

Bengaluru, Karnataka

- Developed and integrated a keyboard shortcut widget across multiple internal products, streamlining complex workflows and improving user productivity
- Built and optimized a customer information form to efficiently display and manage customer data, improving user experience and reducing form submission time significantly

Content Turbine

Full Stack Product Developer Intern

June 2021 – August 2021

Remote

- Built an Interactive Learning Training Platform for Software Engineers using Flask, ReactJS, and Couchbase, enabling hands-on training with custom environments
- Integrated web-based SSH terminal and Docker-based sandbox environments, allowing users to manage remote servers and experiment with preferred tech stacks directly within the platform

EDUCATION

Indian Institute of Information Technology, Guwahati

Bachelor of Technology in Computer Science

2019 – 2023

Guwahati, Assam

PROJECTS

ALGOMINATION - Algorithms with Animation

Django, HTML5/CSS3, JavaScript, anime.js

- Developed an interactive platform with animated visuals to simplify the understanding of core algorithms, including stack operations, sorting algorithms, and searching techniques
- Designed engaging animations to enhance algorithm comprehension, making complex concepts more intuitive and improving user interaction with the platform

Hostel Management System

MERN (MongoDB, Express, React, NodeJS)

- Built a web-based solution for streamlining and digitizing day-to-day hostel activities, optimizing efficiency, and improving overall management
- Designed and seamlessly integrated a robust User Management System, incorporating secure authentication protocols and providing authorized access to confidential data

SKILLS

Languages: Python, JavaScript

Frameworks: ReactJS, Flask, Django

Databases: MySQL, Couchbase

Developer Tools: Docker, Git, GitHub, Postman

Open Source: Typst, Ace Editor, Monaco Editor, webssh2

Soft Skills: Communication, Teamwork, Leadership, Creativity
